

The Practice

Ann Noble Architects was established in 1989 to bring together practicing professionals experienced, and committed to excellence, in all aspects of the provision of healthcare facilities.

Our principal ambition is to work with Architects, Health Consortia & Developers, and Health Service Providers to create appropriate healthcare facilities serving the needs of all users. We believe that appropriate facilities should:

- ♦ be functionally suitable;
- ♦ provide a healing environment for patients;
- ♦ enable staff to carry out their work as effectively as possible;
- ♦ fit harmoniously into their surroundings.

The practice team has worked extensively within the following healthcare environments throughout the UK and overseas:

- ♦ Primary
- ♦ Community
- ♦ Intermediate
- ♦ Acute
- ♦ Tertiary
- ♦ Associated educational and training activities

The immense breadth and depth of our experience is reflected in the range of Service that the practice offers, and in the portfolio of Projects that we have undertaken. These include:

- ♦ the briefing, design, planning, evaluation and procurement of all types of healthcare facilities;
- ♦ regular contributions to national health building guidance; most recently, Child & Adolescent Mental Health Services, and Maternity Services;
- ♦ teaching, regular contributions to conferences and seminars;
- ♦ leadership of diverse research projects; most recently, Reduction of Healthcare Associated Infection by Design, and the Differentiation between Public and Private Spaces in Hospitals.
